### Dairy Performance

The following performance figures were calculated at peak lactation using CowTime's Milking Monitor:

- 61 Cows per operator per hour (cups on cups off)
- 951 Litres per operator per hour (cups on cups off)
- 722 Litres per operator per hour (total milk harvesting time)

### Dairy Builder

- Not available

### Special or key features of this dairy

- This dairy was built 10 years ago, yet it looks like it was built last month.
- Everything is clean, tidy and well organised.
- Comfort and the ability to expand are the big features here.
- The building was built to accommodate a 44 unit rotary should future demands make it a feasible option.
- The husband and wife team say the cows flow really well through the dairy.
- There is plenty of natural light and the big window at the exit is conducive to smooth cow movement.
- Milking is pleasant and the fact that there is "very little mess" by the cows means that the cows also enjoy the experience.
